PETROL PUMP LOCATOR

⦿ Platform used:

- ⦿ Android Studio, django, java, python, php
- ⦿ A Bluetooth device

Our Aim

1. Real Time Data
2. Automation
3. Less Human effort More Output
4. Minimal design
5. User friendly
6. Ease the work
7. Time saving
8. Less dependancy
9. Monitoring

What do we need?

----DATA

Who will upload
the data

Human → 

Machine → 

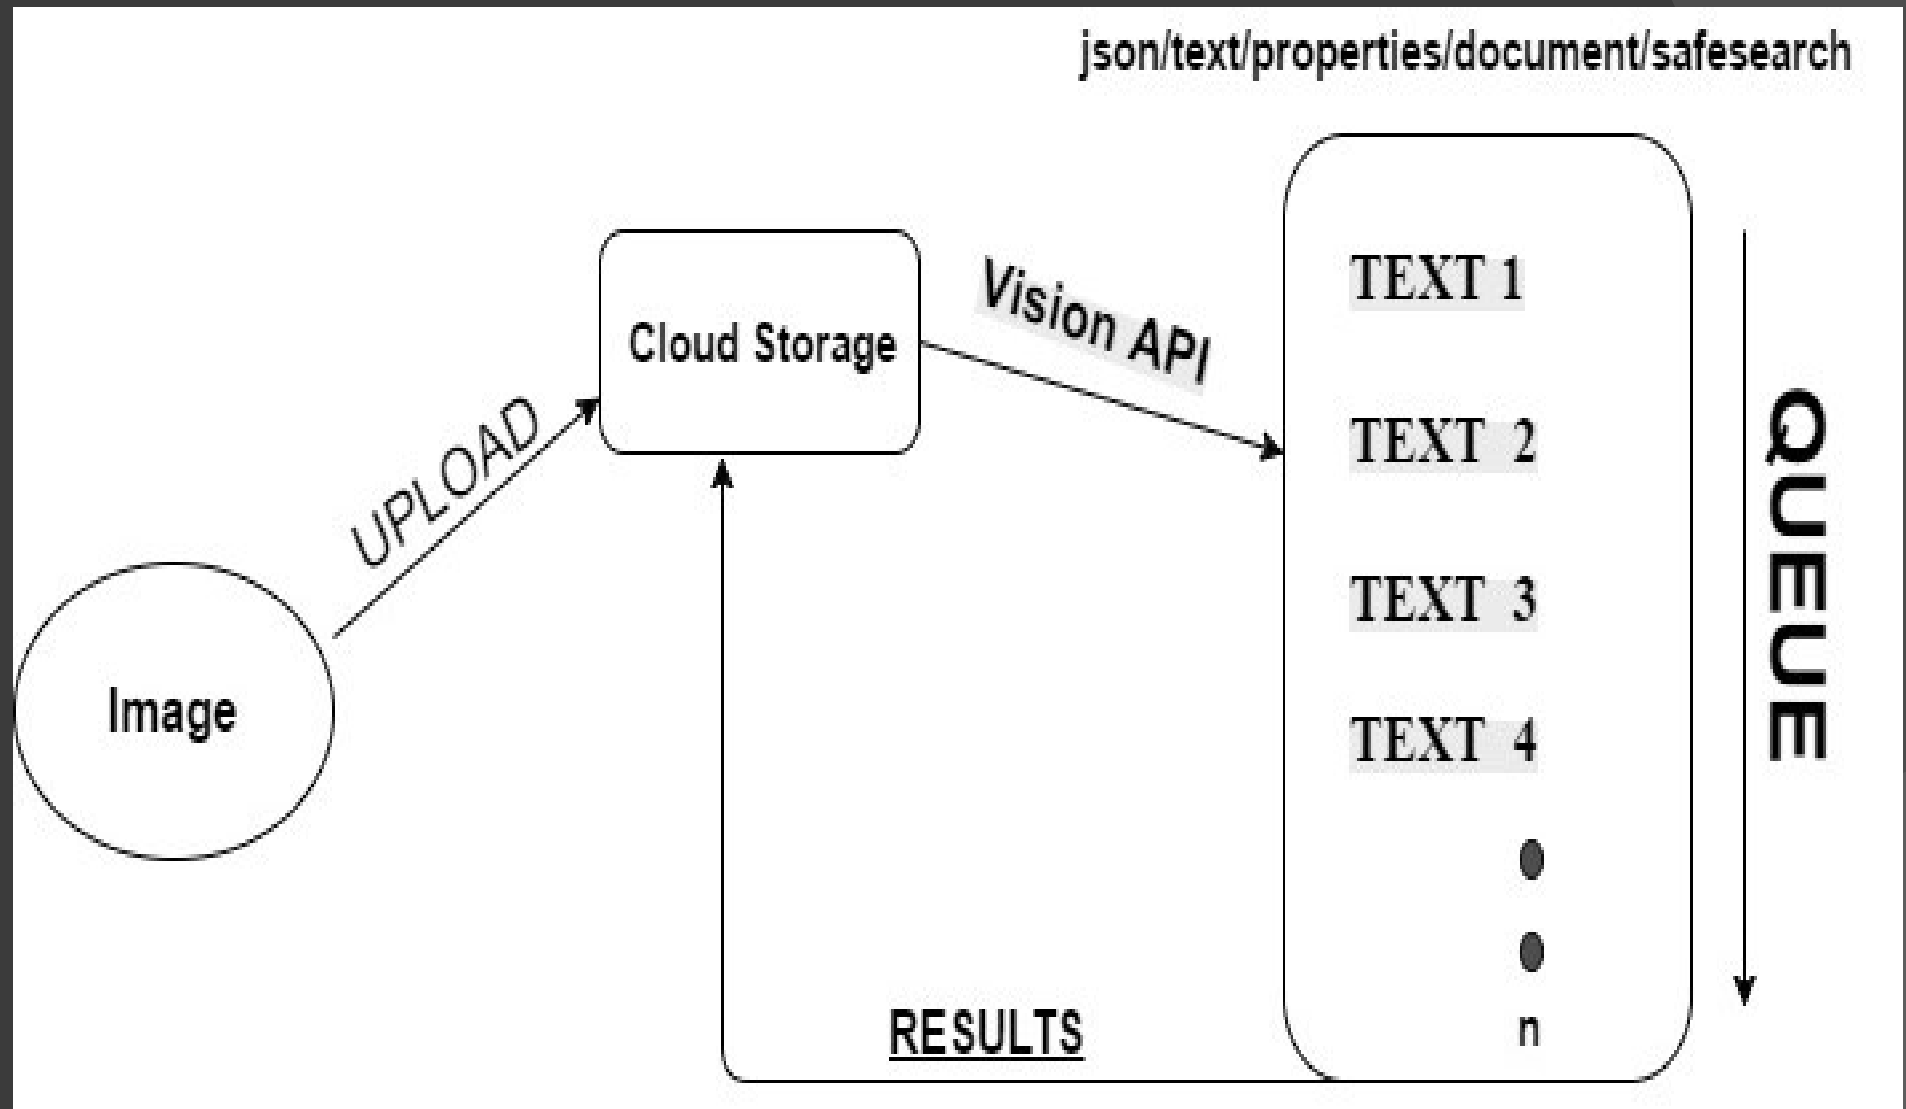

How will we achieve this?

:-Through Automation

With the help of GOOGLE CLOUD VISION API

It provides Optical Character
Recognition (OCR)

How the API will show the result...

STEP 2 :- (for End-users)

List of nearby petrol pumps

SORTED

Search by the name or area of petrol pumps

Features of our app:-

- Offline navigation, directions

Because GPS doesn't need internet.

- Real time information

If the petrol pump is opened or
not

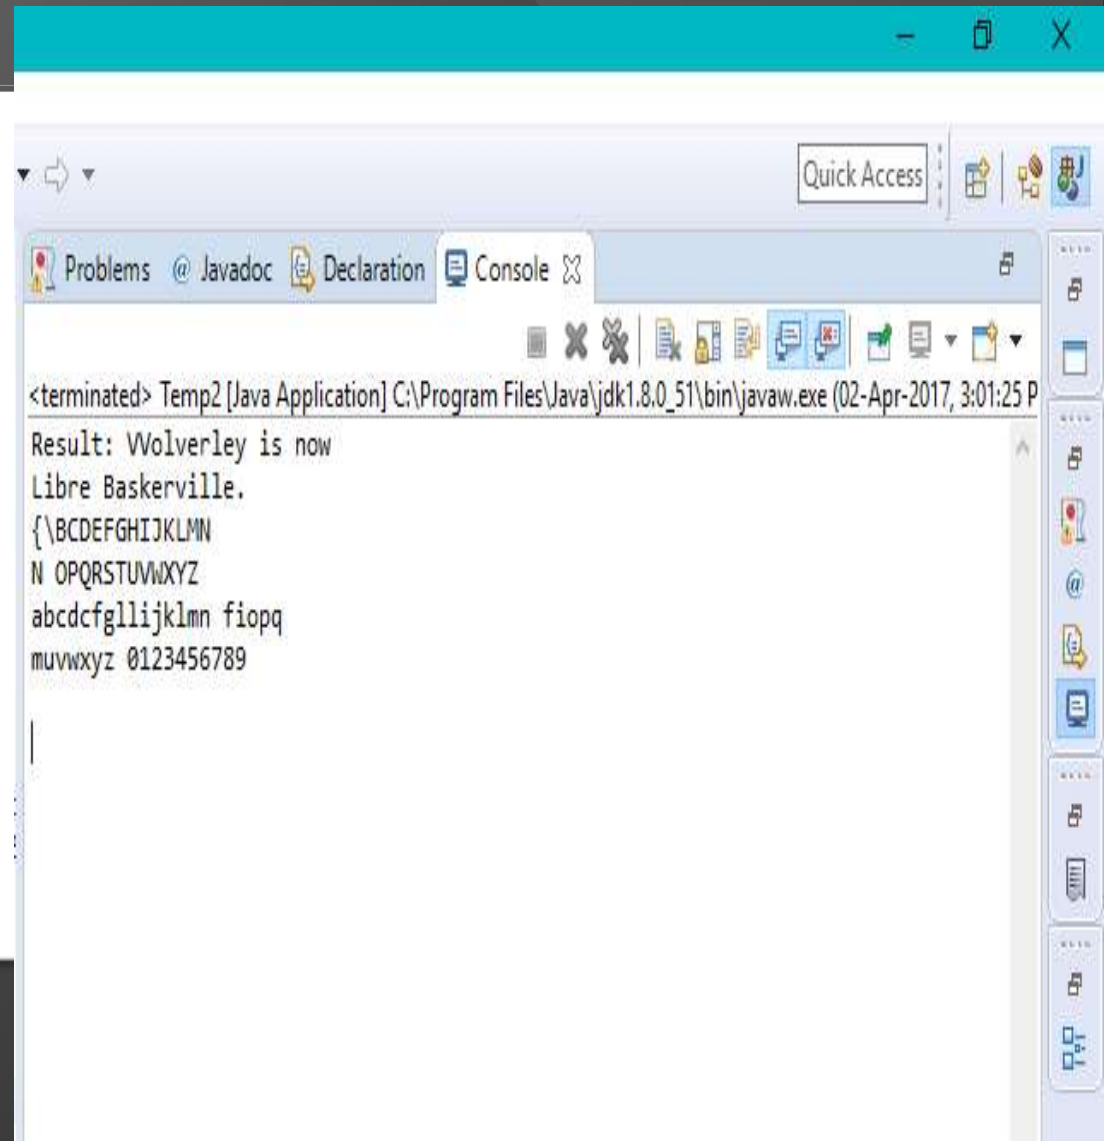

- Admin panel for government

Working of OCR

Wolverley is now
Libre Baskerville.

ABCDEFGHIJKLMNOPQRSTUVWXYZ
ÑOPQRSTUVWXYZ
abcdefghijklmnñopq
rstuvwxyz 0123456789

This is the sample image that will
Be captured by the camera
placed on the petrol pump

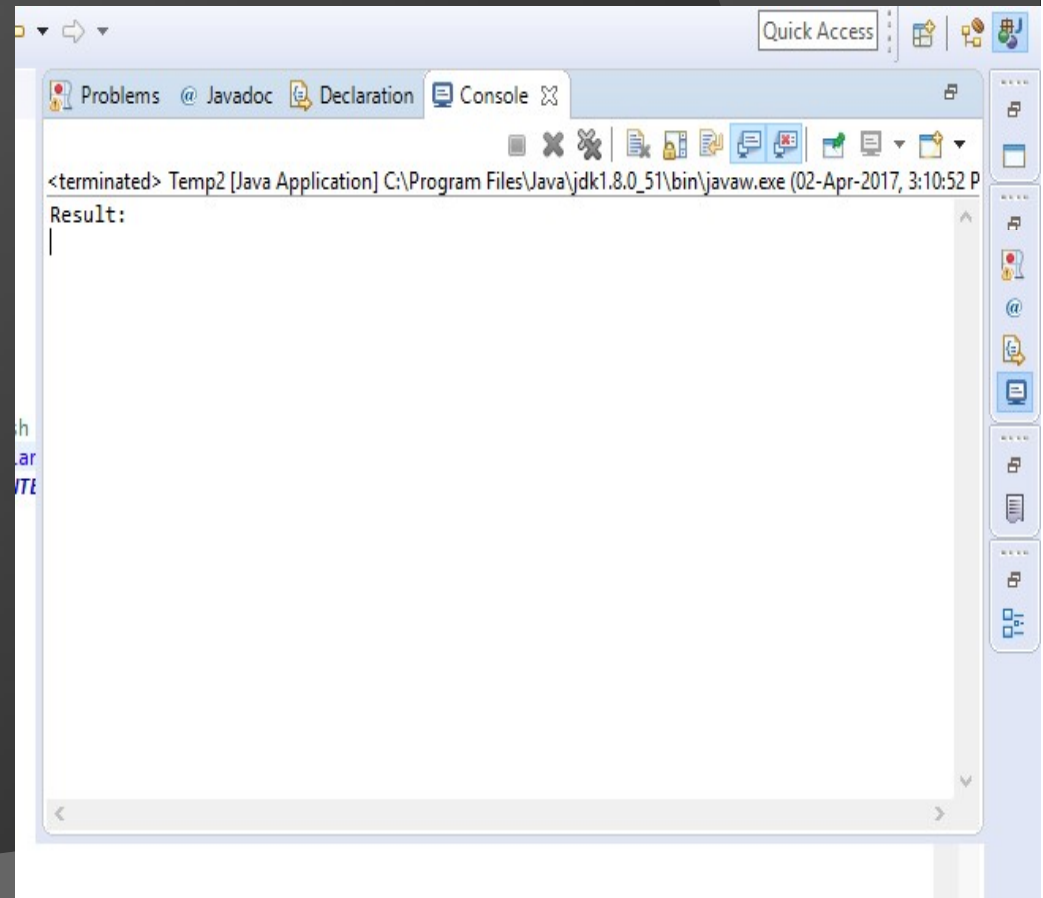

The screenshot shows a Java IDE window with a console output. The console text is as follows:

```
<terminated> Temp2 [Java Application] C:\Program Files\Java\jdk1.8.0_51\bin\javaw.exe (02-Apr-2017, 3:01:25 P  
Result: Wvolverley is now  
Libre Baskerville.  
{\BCDEFGHIJKLMN  
N OPQRSTUVWXYZ  
abcdcfgllijkln fiopq  
muvwxyz 0123456789
```

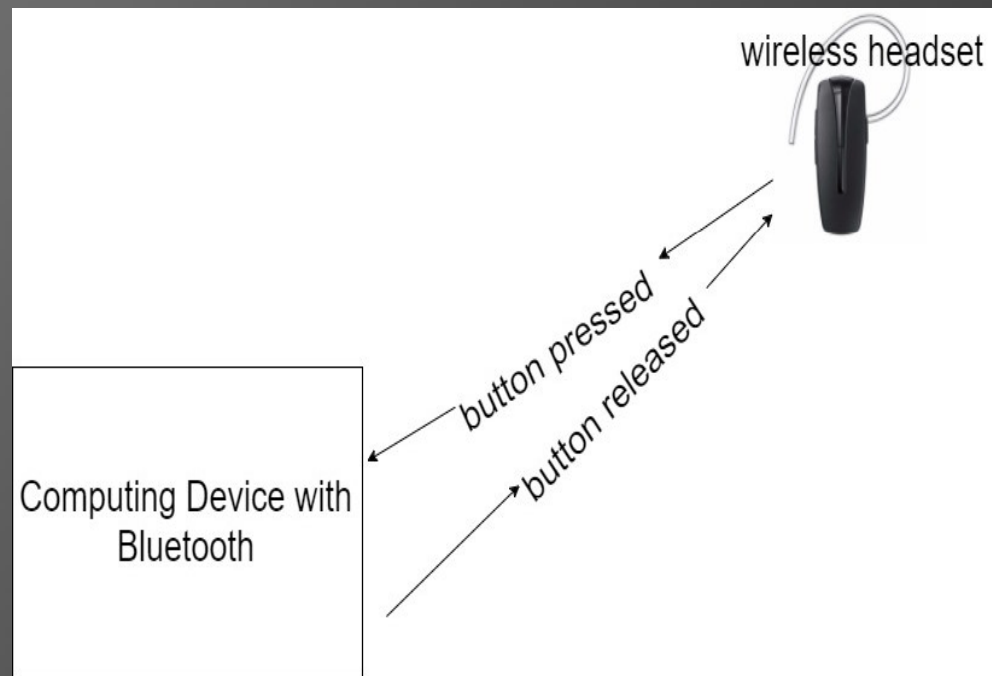

Extracted data using OCR

What if we make every petrol pump connected to internet???

1. We used java asprise SDK to reflect the image on the fuel dispenser screen.

How did we get this idea..

It is difficult task to continuously monitor the screen . Hence we will capture image of screen on button press and release of Hose

Real Time Data

- ⦿ Through the Bluetooth technology we can get the real time data from the petrol pump.
- ⦿ The Bluetooth device will be send the data to intermediate device and the then further it will processed to server.
- ⦿ The Bluetooth device will be attached to the hose of the petrol pump and whenever the hose will trigger the button in the Bluetooth device will be pressed and a signal sent to the computing device and the same will happen when the hose is released.

Benefits of using Bluetooth device instead an attached chip

- ④ We do not have to replace or modify existing machines.
- ④ Implementation will be very easy and cost-effective.
- ④ More trust because of real-time data synchronization
